# Animation Techniques

## Time Lapse

Smovie for Mac comes with a fantastic time lapse feature. Here's how you can use it!

Time lapse animation is the technique where a camera takes a series of images with a set time interval between each one. The interval between images can be anything from half a second up to an hour. When the images are joined together and played back at normal speed, time appears to be moving faster and thus lapsing.

You can create a time lapse of almost anything you wish, so think as creatively as you can! Perhaps you could create a time lapse of the sunset, or speed up the motion of two snails so it looks as though they are racing.

---

*Idea! Create a time lapse animation of a sunset.*
